## INSECTS AND THEIR HABITATS

Insects occur in all habitats. Habitat is the arrangement of food, water, shelter and space that an organism needs to survive. Pictured below are wetland, prairie, urban and forest habitats. Draw a line from each insect to the habitat you think it would prefer. Color these pictures.

**DID YOU KNOW . . .** there are nearly 1 million species of insects in the world and that scientists estimate there are 4 million insects that have not been discovered!
